GENESIS Structural Analysis and Optimization for Press Die

2014 VR&D User Conference @ Monterey

Takeshi Kobiki
DISQUARE Corporation

Agenda

1. Introduction
2. Today's Theme
3. Application of GENESIS to Production Engineering
4. About Practical Use
5. Conclusion

DISQUARE Corporation

```
Established  : 2007(Spin-off from DAIZO Corp.)
President    : Tadashi Matsuo
Common Stock : ¥410 million
Stock Holder : DAIZO (100%)
Employees    : 150(as of Apr. 2014)
Offices      : Tokyo, Osaka, Fukuoka
```

**Oshima Shipbuilding
(Oshima, Nagasaki)**

**Osaka Shipbuilding
(Minato-ku, Osaka)**

**Osaka Office
(Minato-ku, Osaka)**

**Tokyo Head Office
(Shibuya-ku, Tokyo)**

3

# DISQUARE Skills for Manufacturing Industry

Design and Manufacturing Process

Conceptual / Initial / Detail Design	Product Engineering	Product Control	Maintenance

Department

Sales			
R&D			
Purchasing			
Manufacturing			
Quality Assurance			

Market Research

Making Strategy

Digital Engineering

- Styling
- 3D-Modeling
- Digital Mock up
- Knowledge Base

Systems Engineering

- Requirement Management
- ISO26262/DO172B

CAE

- Structural Analysis
- Motion Analysis
- CFD
- Design Optimization

ERP

- Accounting Management
- Sales Management
- Production Management
- Purchase   ・Logistics

Facility management

Facility management
Maintain Planning

EDII

Electronic Orders
Exchange CAD Data

3D Data Usage

- Assembly
- Sales Mate
- 3D Viewer

<Experience in 3D-CAD and CAE>
- Became IBM Partner in 1986
  has deployed CAD/CAM/CAE with mainly CATIA
- Became VR&D Distributor in 2006
- Is supporting Genesis, SMS and VisualDOC
- Users in heavy industry, electronics, auto OEM and its supplier

Product Data Management

- Product Data Management
- Bill of Materials

・Project Management
・System Security

4

Today's Theme

■ **Application of GENESIS to product engineering**
  => Structural Analysis and Design for Press Die

Sheet Metal Forming
ASU/P-form

Plastic Molding
ASU/MOLD

ナレッジ マネジ メントシステム
ASU/TK-base

モデル生成支援ライブ ラリ
ASU/MINT

WELDING
ASU/WELD

電着塗装シミュレーションソフトウェア
ASU/ED-COAT

MATLAB 支援ライブ ラリ
ASU/Matlab Tool Library

次世代流体解析ソフトウェア
ASU/FrontFlow/blue

東京大学加藤千幸研究室 ご提供

次世代構造解析ソフトウェア
ASU/V-Struct

緊急地震速報活用防災システム
ASU-QUICK

ASTOM R&D has own software products for product engineering

5

Today's Theme

■ Application of GENESIS to Press Die Design

Demand on lighter structure of products using sheet metal
=>Adoption of high-tensile steel plate
Needs stiffer die
=>Uses GENESIS structural analysis and design
Proposal Solution
=>Will be possible to use existing press equipment

Issue about Using High-tensile Steel Plate

■ **Spring back of High-tensile steel plate is larger.**

■ **After Spring Back**
■ **Before Spring Back**

Bending Deformation

Torsional Deformation

High Tensile Steel

Large

Spring Back

Small

980MPa

780MPa

590MPa

440MPa

Low ← Tensile Strength → High
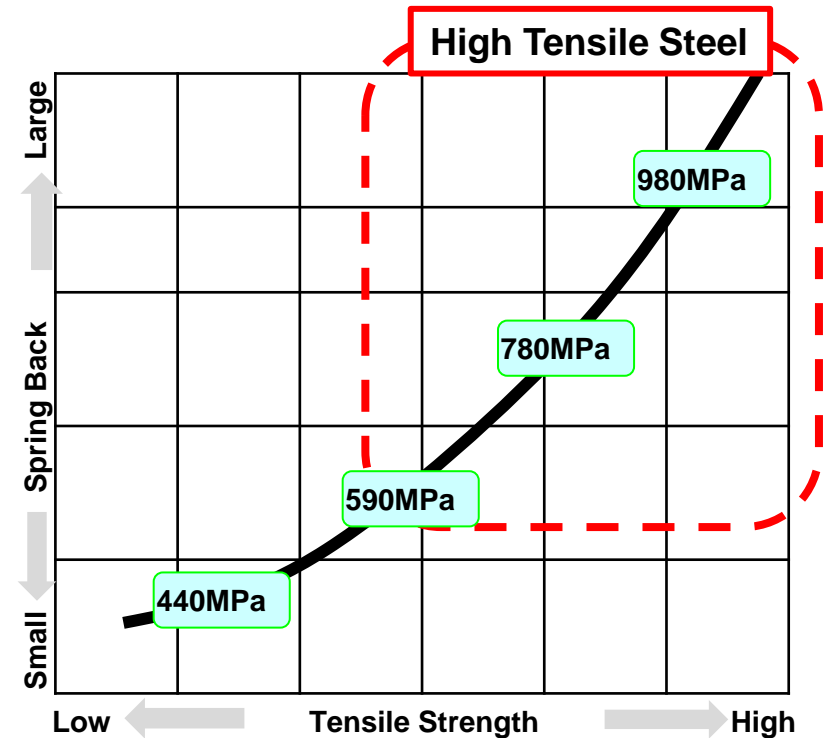

➡ **Improvement of prediction accuracy of spring back is important**

Issue about Prediction for Die Deflection

- **Larger die has deflection**
- **In case of high tensile steel plate, stronger reaction forces of sheet metal pushes dies**
- **Sheet metal forming analysis**
  - **Assumption that Dies are rigid body**
  - **Assumption that Dies uniformly contacts sheet metal**

Difference：Stiffness of Die

- **Actual press forming**
  - **Dies occurs elastic deformation**
  - **Dies non-uniformly contacts sheet metal**
  - **=>Cannot ignore Reaction forces from sheet metal**

Needs structural analysis of elastic deformation of dies with considering of reaction forces from sheet metal

Solution Approach

DI SQUARE

■ Minimize Die's deflection by Genesis Structural Analysis/Design

Load Condition

Modify Geometry

```
┌─────────────────────────────┐
│ Sheet Metal Forming Analysis│

└─────────────────────────────┘
```
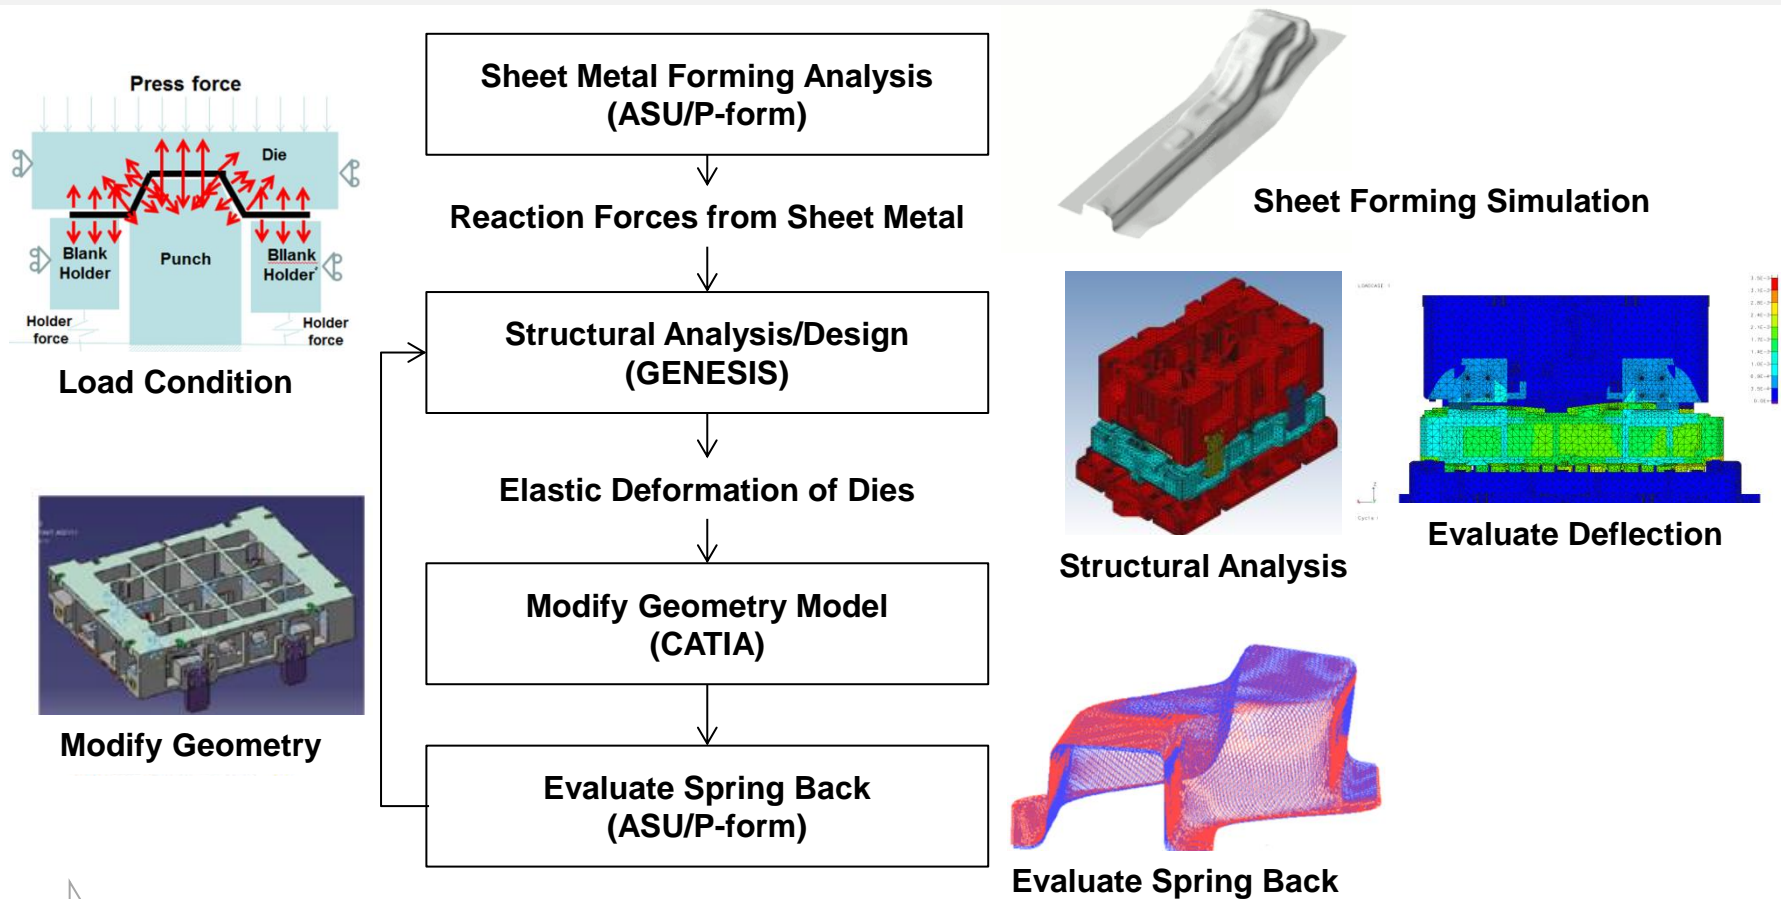

Sheet Forming Simulation

Structural Analysis

Evaluate Deflection

Evaluate Spring Back

➔ **Stiffened die makes possible to use existing press equipment.**

9

# Target: Reduction of Iteration numbers of die modification

■ **For Super High tensile steel plate(>980MPa) ;
Reduction will be over 50% after 2017**

| Shorten Delivery |
| Cost Reduction |

2013

3-8 times

Die Production

Die Modification

Physical Test Evaluation

Die Structural Optimization

After 2017

1-3 times

Die Production

Die Modification

Physical Test Evaluation
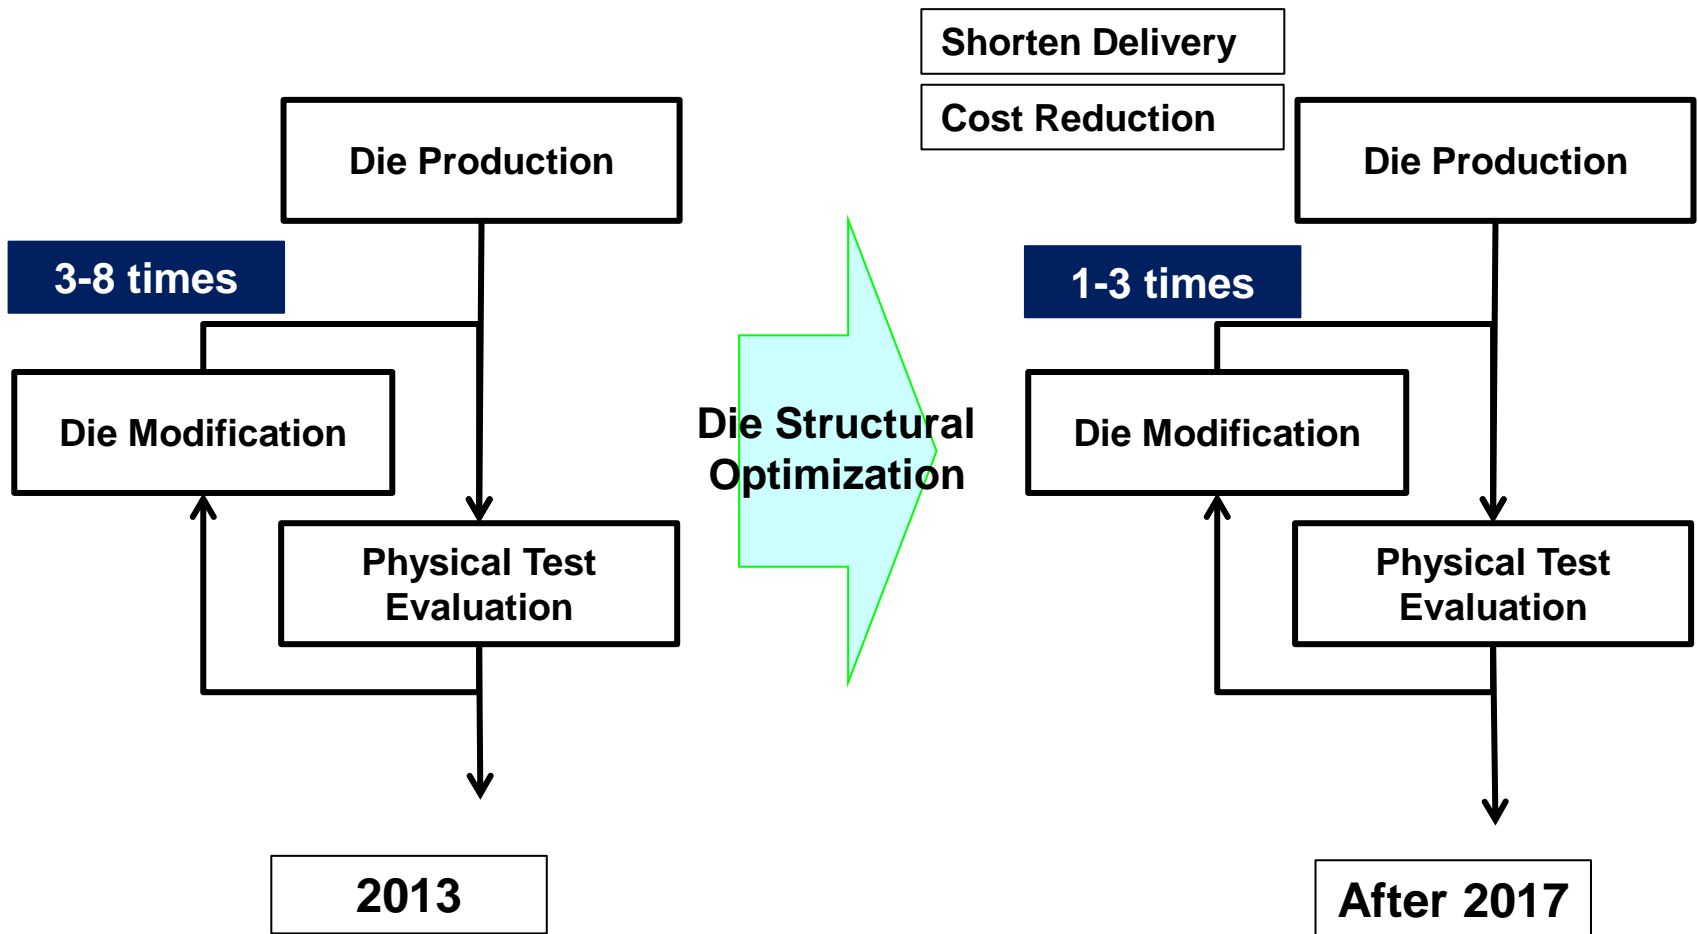

Requirement for Practical Use

■ **Die Analysis/Optimization :Large FEM Problem**

Assembly Parts

Whole of dies have Large Dimension.

Assembly Model

Forming surfaces have complex shape

A lot of Meshes

Body Contact

Large FEM Problem

Non-Linear Contact Analysis

Performance Speed

Cloud

Many Core

Part

Work Station

Linear Analysis

Non Linear Analysis

Require the environment for handling large FEM Problem

11

Thinking about SMP Performance

■ **SMP performances are like Baseline when threads is changed.
=> Performances are not grow when threads number is over 4.**

■ **Observed the effect of memory bandwidth by adding memory.
=>Very simple test however we got 12% of improvement (8thread).**

**OS：Cent OS 6.5 64bit
CPU：Intel X5675 @3.07GHz×2 12Cores**

**Improvement;
12% at 8 threads**
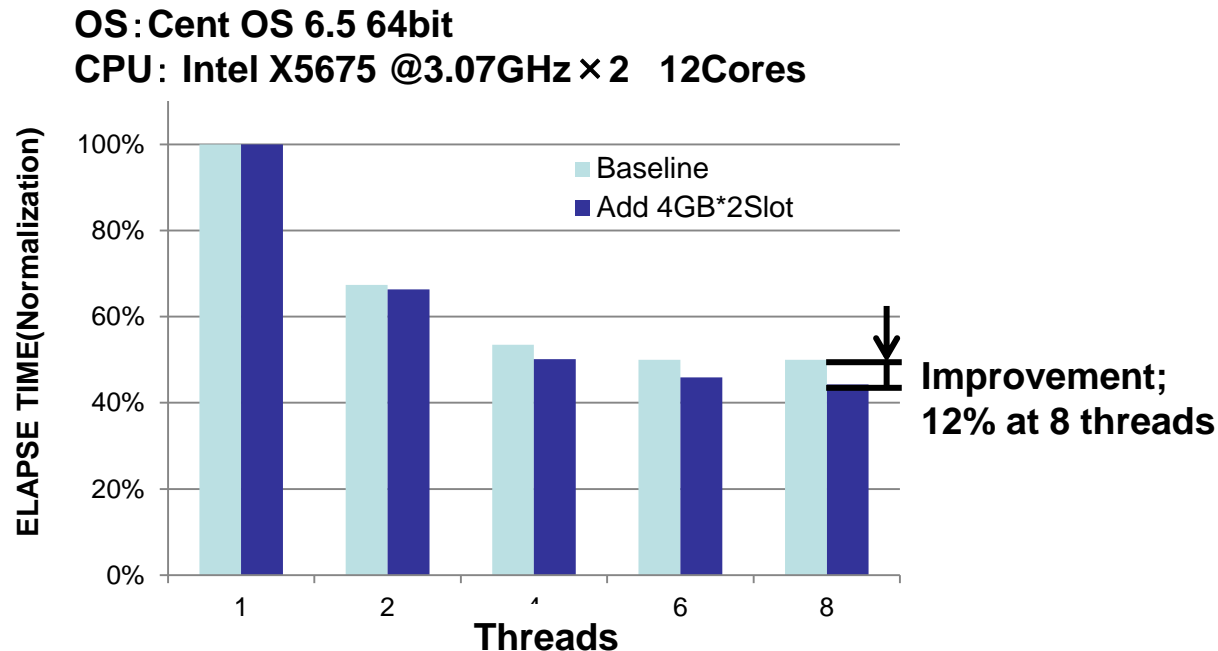

▷ **Would like to try virtual technology that extends available memory.**

Conclusion

- **Described an innovative design process for press die using Genesis and ASTOM/P-form.**
    - **Continues to research in order to satisfy target of 2017.**

- **Also described simple test for improvement of performance.**
    - **It showed bandwidth is effective.**

- **Would like to try virtual technology that extends available memory.**
    - **Would like to report to VR&D and discuss it.**

Special thanks to;

Masakatsu Tsuneki, ASTOM R&D.

Kazuhiro Kooriyama, Automotive Design Solution,Inc.

Toshihiro Ueda, DISQUARE, Corp.

Thank You.
